Users Operations

The users operations report is a comprehensive report of user movements on the program, for example, when the user enters a sales invoice, this transaction will be recorded, and when returning .to a previous invoice or creating a new invoice, this process will also be recorded

In other words, this report is to follow any movement of the user on the program with showing the time and date of the operation and the IP address of the device that was accessed from it

To access this report through

General - Reports - Users Operations

It includes a report request screen

User : The username required for the report

From Date : The beginning of the required reporting period

To Date : The end of the required reporting period

Reference ID : To review the user's movement with a specific process (for example, an invoice serial (number is recorded

Notice

In order to save users operations, you must enable the "Log users operations" option, and access this option through

File - Tools - Options - Admin Options
