

Barcode Designer Options

Label Width	500	Horizontal separation Between	50
Painter Height	250	Vertical separation between lab	50
Labels Count	1		
Stickers Count			
Starting from the	1		
Zoom	100%		
Units	Millimeter		

☐ Draw a frame around la

OK Close

Label Width: To specify the barcode label width

Label Height: To determine the height of the barcode label

Number of Labels: Specifies the number of copies of labels when printing. For example, you want to print two labels from each barcode, then you put the number 2.

Label number field: Choose the cell that specifies the printed label numbers, for example we choose the quantity field in case we want to print the material barcode from the purchase invoice from the invoice barcode printing report.

Starting with the label: In the case of using an A4 size printer, for example, the number of labels on an A4 page follows the size of the barcode on the page, and we assume that there are thirty labels on a single A4 page and we pre-printed on the first ten labels then we choose starting from the 11th label to complete Print and exceed the ten preprinted labels on this page.

Zoom: Choose the ratio of the screen size of the label design to help with preview and design according to the size of the user screen.

Units: To specify the unit of measurement

The horizontal spacing between the labels: To determine the space between the barcode labels horizontally

The vertical spacing between the labels: To determine the space between the barcode labels vertically

Draw a frame around the label: To draw a frame around the entire design to show design errors, or choose the size of the paper and the sticker when printing
