

:Exchange change schedule

You can determine the exchange rate for the secondary currencies in which the facility deals with the date of the exchange rate change

The program will automatically recognize currency price changes through this table to automatically calculate the profits or losses of currencies when generating their restrictions from the specified document.

When modifying the exchange value of a particular currency from the currency card, the new value will be added to the exchange rate schedule for that currency automatically.

Please note that the adjustments made to the currency rate from documents such as invoices or entry vouchers are not added to the exchange currencies schedule automatically, and it is the responsibility of the user or the authority manager if the authority to modify the currency of the documents is given to users

The screenshot shows the 'Currencies' window with the 'USD' currency selected. The 'Text' dialog box is open, displaying a table of exchange rates for USD. The table has columns for 'Date' and 'Exchange'. The current exchange rate for USD is 4.06.

	Date	Exchange
1	24-02-2021	1
2	25-02-2021	1.02
3	26-02-2021	1.01
4	27-02-2021	1.03
