

Users Categories

The basic idea of users categories is to group users of the program into groups, and when adding a user and linking it to the category, and giving the user permission to work on the program, the category under which this user is included will take the powers that he took, and when adding another user with the same work prerogatives on the program, you will not be obliged To access the permissions to give it to the user, all you have to do is link the new user to the category to which it belongs to take its prerogatives.

To access the table of users categories through

General - Tables - Users Categories

	Name
1	sells
2	Administration
3	Stores
4	Financial auditor
5
